Casper API

Link:

Casper API is an infrastructure startup for storing big data on the blockchain. Our goal is the primary solution to the problem of the high cost of data storage and providing DApps developers with a competitive database for the price and speed of decentralized storage managed via smart contracts.

- Blockchain-based project
- ICO project
- Worldwide global 0-cost storage

Backend Task

- **Code review of the backend part of the project**
- **Develop pack of smart-contracts for ICO and internal data exchange between users**

Result

- **Smart-contracts written in Solidity**
- **Code-review report adjusted projects privacy and fault-tolerance**
